Full Stack JavaScript Developer with expertise in technologies such as React.js, Redux, Angular.js, Firebase, Next.js, Typescript, Express, Node.js, PostgreSQL, and Sequelize. I possess strong problem-solving and communication skills, applying agile methodologies like SCRUM. I also have a solid command of version control tools like GIT and advanced English proficiency. I had the opportunity to lead a project in creating an E-commerce platform for a high-end shoe restoration company in Bogotá, Colombia, significantly increasing customer traffic and sales, enhancing the company's online presence.

PROJECTS

Full Stack Web Developer –Tennis app   Nov-2023

Personal Project

Tennis app, the application I've developed using Next.js, Firebase, Node.js, and JavaScript, offers a streamlined experience for both users and administrators. Authenticated users can register for championships, explore events, and navigate through available tournaments. Administrators, with their specific roles, have the ability to create new championships, access the complete list of tournaments, check the number of participants in each event, remove participants as needed, and update scores. The app focuses on secure authentication, efficient engagement, and effective championship management, providing a robust platform for the sports and gaming community.

Full Stack Web Developer – Food recipes   Jul. 2023 - Aug. 2023

Academic experience. Henry Bootcamp

In this project, the main objective is to develop a web application to retrieve and present detailed culinary recipes hosted on an external API. The fundamental purpose is to provide users with an interactive and accessible experience to explore and learn about various recipes, encouraging their interest in cooking and healthy eating.

Frontend: React.js, Redux
Backend: Express, Node.js Database: PostgreSQL and Sequelize.

Full Stack Web Developer – Pokemon app   Aug. 2023 - Sep. 2023

Academic experience. Henry Bootcamp

The goal of this project is to create a web application that allows users to explore and discover a vast collection of animated Pokémon cards. The main objective is to provide an interactive and entertaining experience for Pokémon enthusiasts, offering detailed information about each card and fostering a passion for these iconic cartoon characters. The application also includes features like searching by name, filtering by type and origin, and sorting options to enhance the user experience.
Frontend: React.js, Redux Backend: Express, Node.js Database: PostgreSQL and Sequelize. GitHub Repository: https://github.com/andresisfx/Pokemon-project.git

PROFESSIONAL EXPERIENCE

Full Stack Developer   Sep 2023 - Oct 2023

Fixer Shoes, Bogotá, Colombia

Development of a high-quality E-commerce platform for a high-end shoe restoration company. In this project, we implemented key functionalities such as a shopping cart, payment gateway, user and product management, along with an administrative panel for sales statistics. As a result, we significantly increased customer traffic and sales, improving the company's online presence. My role in this project focuses on backend logic, where I created models, routes, controllers, and handlers that enable the retrieval of information requested by the frontend. Additionally, I provide support to the team to address and resolve issues, ensuring the successful delivery of progress to the client.

skills: React, Redux, Javascript, Tailwind, Css, PostgreSQL, Express, Sequelize, Apis, Node.js.
